MUSEUM

With customers as diverse as Cadbury World, the Alton Towers Hotel and the Sandcastle Waterworld, [Fingershield Safety UK](#) is committed to providing peace of mind to all types of establishment that open their doors to the general public.

Amongst its varied customer base, Fingershield protects the doors of countless family-type attractions all over the United Kingdom and, having spoken to the National Railway Museum in York, we discovered just how much of a priority door safety really is for establishments that are regularly frequented by the general public...

Keeping Health and Safety on Track

In an age where Health and Safety is such a growing priority, the National Railway Museum is one of many establishments that are committed to keeping the safety of their visitors on track. The museum's Kelly Melarkey said: *"When you have so many children and families coming to the museum each day, door safety is such an important issue that it simply has to be addressed – this is why we considered it important to protect the doors with Fingershield."*

Having first installed Fingershield devices in May 2001, Kelly commented: *"Any reports of accidents and injuries are always channelled through our department and, since we have had the Fingershield devices installed, we haven't received any reports of finger-trapping accidents taking place at the museum. We are really pleased with the durability of the product and it is also very affordable – we prefer to deal with reliable and affordable companies."*

So with family-type attractions being such a melting pot for families and young children alike, the need to ensure that adequate safety measures are in place to eradicate the risk of finger-trapping accidents is all the more urgent.
